

Premier Labellers

P2000 Automatic Sleever

Shrink Sleeve Labelling = Added Value

Suitable for a wide range of products from all industries, our robust and reliable shrink sleeve labelling machinery is built to the same high standards that our customers have experienced with our pressure sensitive self-adhesive labelling machines.

Security

Tamper evident seals are compulsory for many products including pain relievers, cold medicines, nasal sprays, eye care solutions, moisturisers and vitamins. Shrink sleeve labelling provides an attractive and secure solution to both these problems.

Labelling Regulations - Solved

With increasing demands placed on manufacturers to provide detailed product information, shrink sleeve labelling offers additional space to clearly display the required information providing consumers with added peace of mind and full knowledge of the product's content.

Unique Brand Image

In a competitive market increasingly driven by brand image, shrink sleeve labelling provides brand designers with the capability to create a unique image for their brands. With unlimited scope for package design, distinctive and appealing packaging gives any brand an added competitive advantage on the shelf.

Square, round oval, oblong, curved and round shaped containers offer a distinct and tactile appeal to any brand. Shrink sleeve labelling opens up a whole new world to brand designers without providing production engineers with problematic and often impossible container designs.

Product Integrity

The use of efficient heat tunnel technology guarantees the integrity of your product allowing even the most sensitive of products to be labelled using shrink technology.

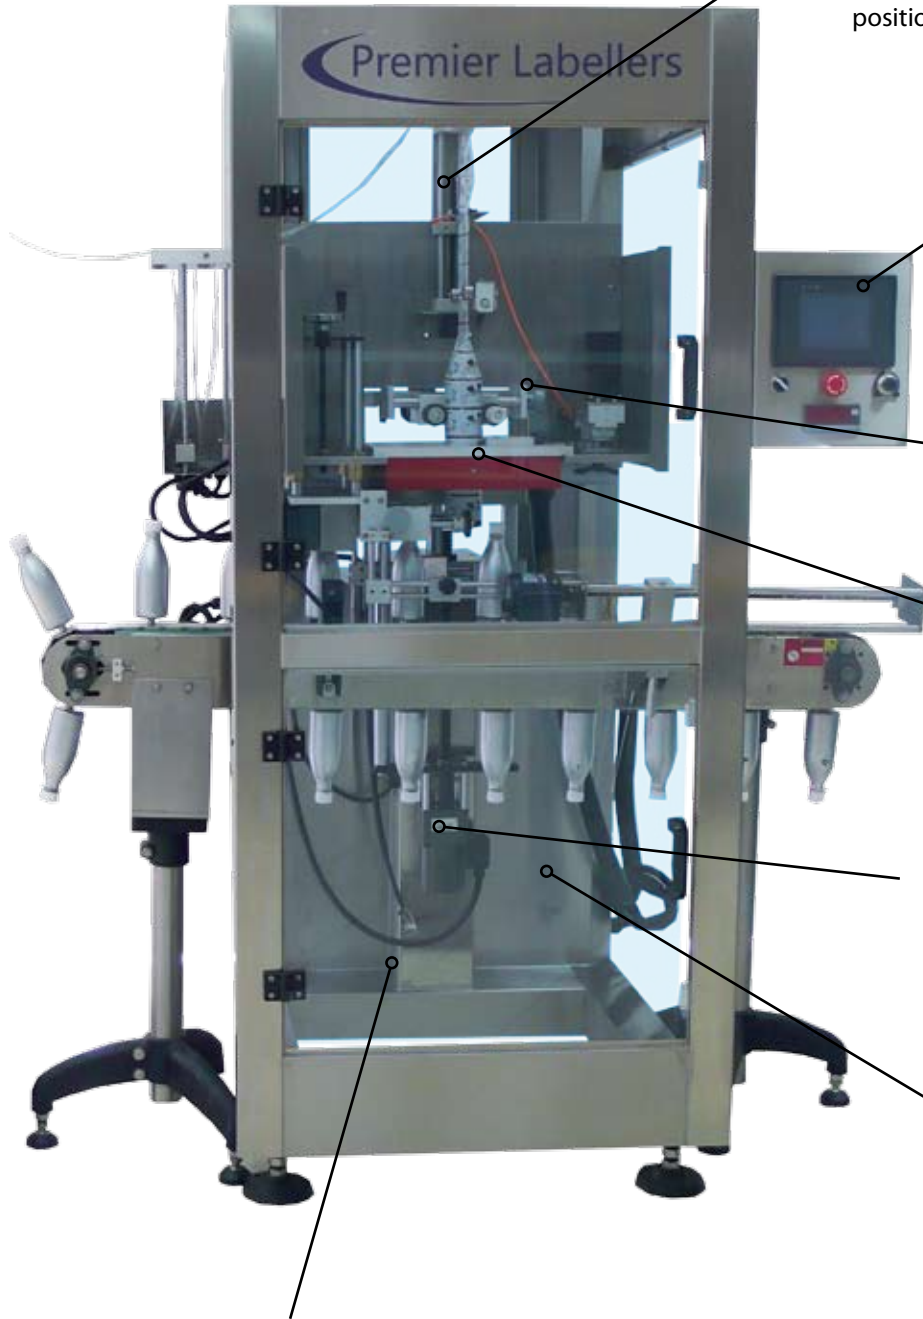

P2000 Features

The P2000 has been developed to meet the increasing demand from our customers for a cost effective and reliable shrink sleeve applicator that can perform in a modern production environment.

Simplicity

A simplified sleeve material feed path allows the P2000 to be changed over in seconds rather than minutes. Optional automatic splicing units are also available for continuous operation.

High Speed Performance

High speed sensor ensures reliable and accurate sleeve positioning

User Friendly Display

Integrated LCD display allows the operator to control and monitor all machine functions from a single point

Easy Changeover

Quick release fitting allow for rapid changeover of cutting mandrel

Accuracy

Single drive mechanism provides accurate and repeatable feeding performance

Automatic Adjustment

Powered elevation automatically adjusts machine height via the user control panel

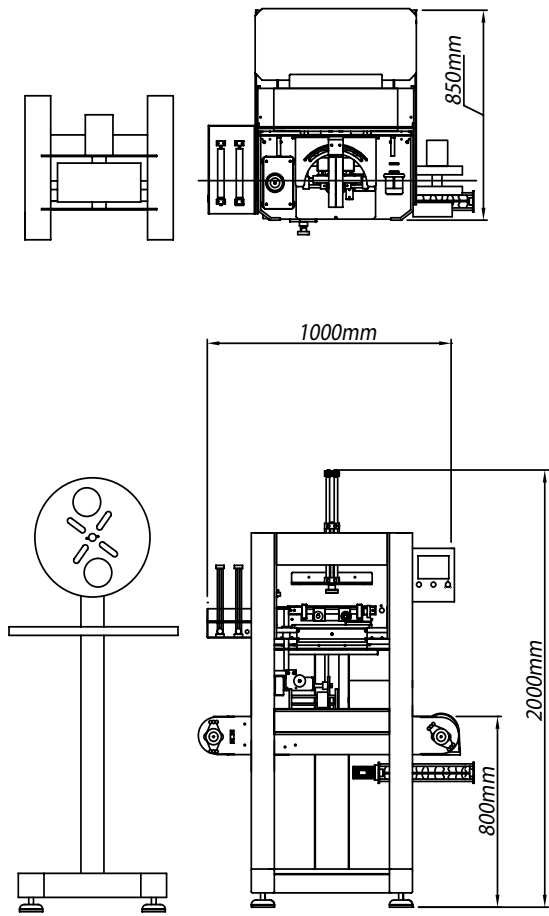

Intelligent Control

Utilising the latest PLC control systems, the P2000 shrink sleeve labeller provides the user with total control and versatility

Safety

Fully interlocked guarding ensures complete safety during operation. Fully conforms to all CE regulations

Machine Specifications	
Container Diameter	28-55mm / 55mm-95mm / 95mm-125mm
Sleeve Insertion Length	30mm - 190mm
Sleeve Thickness	0.04 - 0.08 mm
Sleeve Reel Core Diameter	127mm - 254mm
Max Production Speed	250 - 300 bpm
Electrical Supply	3 phase 220v/380v 50Hz
Electrical Consumption	2.5Kw Machine / 15Kw Tunnel
Weight	300Kg
